PROJECTS

College Event Management System -(HTML | CSS | Bootstrap | PHP)

- Developed an web application for managing events in college. The application stores students data in a database of registered events. And the registered data will be assigned to a coordinator to process the event.

- PHP is used to store the data in a database. As the data is stored, it makes easy to work with the data.

Skin Disease Detection -(Python | HTML | CSS | Bootstrap)

- Developed and trained a Convolutional Neural Network (CNN) algorithm to accurately detect skin diseases from images, enhancing preliminary diagnosis.

- Integrated the trained CNN model into a user-friendly web application, allowing users to effortlessly upload skin images for instant analysis and disease identification.

Node Hotel Application -(Nodejs | Expressjs | MongoDB | Javascript | Postman)

- The Node Hotel application is a Node.js-based system developed using the Express.js framework, with MongoDB as the chosen database. This application manages information related to persons (staff) and menu items. It exposes specific endpoints to handle CRUD (Create, Read, Update, Delete) operations for both persons and menu items.
